OVERVIEW

This document provides an overview of the DWMP for the Northumbrian Water (NWL) Level 1 Operating Area.

Within the Level 1 Operating Area, there are:

- 350 Wastewater Treatment Works (WwTW)
- 7 'Level 2' Strategic Planning Areas (SPA)
- 360 'Level 3' Tactical Planning Unit (TPU) areas
- 478 Wastewater Drainage Areas

The total estimated population is 2.75 million.

LEVEL 2 STRATEGIC PLANNING AREAS WITHIN THE LEVEL 1 OPERATING AREA

Within the Level 1 Operating Area, seven Level 2 SPAs have been identified. These are:

- Northumberland
- Rural Tyne
- Tyneside
- Wearside
- Wear
- Teesdale
- Teesside

LEVEL 2 STRATEGIC PLANNING AREAS

KEY STAKEHOLDERS

It is widely recognised and acknowledged that drainage systems are complex and have numerous interactions, both known and unknown. It was therefore important that the DWMP was not created solely by Northumbrian Water. While NWL have been tasked with the delivery of the DWMP, it was critical that the public and relevant stakeholders actively participated and offered support in its creation. We have worked with a range of relevant stakeholders in the production of the DWMP, including the Environment Agency (EA), Lead Local Flood Authorities, Local Planning Authorities, housing developers and environmental partners.

Through different partnerships and strategies, we play an active role within the region, working collaboratively with stakeholders on several projects. The DWMP builds on the strong foundation of the Northumbria Integrated Drainage Partnership (NIDP), which consists of 14 Lead Local Flood Authorities, the EA and Northumbrian Water. One of the aims of the NIDP is to identify opportunities to deliver surface water management schemes within catchments to reduce the risk and impact of flooding. Catchments are taken from the investigation stages where opportunity areas are identified, through to the outline business case stage to determine funding sources, and ultimately through to scheme delivery. The award-winning partnership approach, which is based around collaboration to identify priority investment areas where benefits can be delivered for multiple stakeholders, provides an excellent platform for the DWMP.

To ensure that existing and future opportunities for working collaboratively with stakeholders were included in the production of the DWMP, engagement sessions were held in March 2023. During these sessions, all the geographical areas covered by the DWMP were reviewed to identify, record and map ongoing and future opportunities.

Collaborative Working Opportunities

Level 2 Strategic Planning Area	Organisation	Opportunity Type
Northumberland	Environment Agency	Pollution
Rural Tyne	Environment Agency	Flooding
Rural Tyne	Gateshead Council	Flooding, Other
Rural Tyne	Gateshead Council and Environment Agency	Flooding
Rural Tyne	Northumberland County Council	Flooding
Rural Tyne	Parish Council	Flooding
Rural Tyne	Tyne Catchment Partnership	Other
Teesdale	Darlington Council	Flooding, Other
Teesdale	Darlington Council / Environment Agency / NWL	Flooding
Teesdale	Darlington Council / NWL	Pollution
Teesdale	Environment Agency	Pollution, Other
Teesdale	Environment Agency / Darlington Council	Flooding
Teesdale	Environment Agency / NWL	Pollution
Teesdale	Environment Agency	Flooding
Teesdale	NWL / Darlington Council	Other
Teesside	Environmental Agency	Flooding, Pollution, Other
Teesside	Environmental Agency / RCBC	Flooding
Teesside	Environmental Agency / Tees Trust	Other
Teesside	Middlesbrough Council	Flooding, Other, Water/Bathing Water
Teesside	RCBC	Flooding, Pollution, Other
Teesside	RCBC / Teesworks	Other
Teesside	SBC	Flooding
Teesside	Tees River Trusts / EA	Other
Tyneside	Environment Agency	Flooding, Pollution, Other
Tyneside	Gateshead Council	Flooding, Other
Tyneside	Gateshead Council and the Environment Agency	Flooding

Level 2 Strategic Planning Area	Organisation	Opportunity Type
Tyneside	Gateshead Council, Metro Green Project Board	Other
Wear	Barratt Homes	Flooding
Wear	Darlington Council / Environmental Agency	Flooding

CATCHMENT NEEDS

Through the Baseline Risk and Vulnerability Assessment (BRAVA) and Problem Characterisation stages of the DWMP, the requirements for investment within catchments were identified.

The following summaries provide the detail of the ‘Catchment Needs’ that have been identified within the NWL L1 Operating Area.

Storm Overflow Discharge Reduction Plan

The following table summarises the number of storm overflows within the Level 1 Operating Area and how many have been included in the DWMP for improvement in line with the Storm Overflow Discharge Reduction Plan (SODRP).

Storm Overflow Categorisation	Count	Storm Overflows Requiring Improvement
Inland – High Priority	478	335
Inland – Not High Priority	948	588
Bathing Water	82	59
Coastal / Estuarine (not linked to Bathing Water)	48	35
Total	1,556	1,017

Storm Overflow Screening

Under the SODRP, all storm overflows are required to include 6mm screening provision on any discharges that are made.

The following table summarises the number of storm overflows within the Level 1 Operating Area that have been included in the DWMP for the provision of 6mm screening.

Storm Overflow Categorisation	Count	Storm Overflows Requiring Screening
Inland – High Priority	478	241
Inland – Not High Priority	948	543
Bathing Water	82	50
Coastal / Estuarine (not linked to Bathing Water)	48	15
Total	1,556	849

The details of the storm overflows within each of the Level 2 Strategic Planning Areas can be found at the end of this document.

Wastewater Treatment Works Compliance

Analyses have been completed to determine the interventions that are likely to be required to ensure all wastewater treatment works (WwTW) are operating in compliance with the permits for dry weather flow (DWF) treatment and treated effluent discharge quality.

The following table summarises the number of WwTWs within the Level 1 Operating Area that have been included in the DWMP (up to 2060) for DWF permit compliance and treated effluent discharge quality permit compliance (phosphorous (P), biological oxygen demand (BOD) and ammonia (Amm) indicators).

Intervention Required	Count of WwTWs
DWF Compliance Investigation/Scheme	11
Phosphorous (P) Investigation/Scheme	51
Biological Oxygen Demand (BOD) Investigation/Scheme	15
Ammonia (Amm) Investigation/Scheme	30

Long-Term Delivery Strategy for Flooding and Pollution

The National Infrastructure Commission's report 'Reducing the risk of surface water flooding'¹ highlighted the importance of a national approach to tackle flooding, and the costs and challenges of eliminating sewer flooding. Given this, and the greater insight we have gained from developing the DWMP, the ambition for flooding and pollution risk has been adjusted to what is considered a stretching but achievable level that would be economically beneficial to deliver.

The following table summarises the level of risk within the Level 1 Operating Area against the flooding and pollution planning objectives.

¹ <https://nic.org.uk/studies-reports/reducing-the-risks-of-surface-water-flooding/surface-water-flooding-final-report/>

Planning Objective	Measure	Count				
		2020	2025	2030	2045	2060
PO1 – Internal Flood Risk	Count of properties at risk of flooding internally during a 1 in 20 year return period rainfall event	15,735	15,787	16,200	23,587	25,769
PO2 – External Flood Risk	Count of properties at risk of flooding externally during a 1 in 20 year return period rainfall event	232,945	234,395	236,343	304,571	320,355
PO3 – 1 in 50 Year Population at Risk	Population at risk of flooding during a 1 in 50 year return period rainfall event	407,475	410,704	413,947	540,245	570,204
PO6 – Pollution	Count of manholes near watercourses at risk of flooding during a 1 in 5 year return period rainfall event	2,066	2,069	2,096	2,704	2,886

Water Industry National Environment Programme (WINEP)

The Water Industry National Environment Programme (WINEP) is the programme of actions water companies need to take to meet statutory environmental obligations, non-statutory environmental requirements or delivery against a water company's statutory functions.

Statutory obligations (S) arise from legislative requirements and the need to comply with obligations imposed directly by statute or by permits, licences and authorisations granted by the Secretary of State, the Environment Agency or other body of competent jurisdiction. Other statutory obligations include ministerial directions and meeting specific planning requirements. While it is important to understand the costs and benefits of actions needed, water companies must complete WINEP actions to fulfil statutory obligations.

Further information can be found at [Water industry national environment programme \(WINEP\) methodology - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/publications/water-industry-national-environment-programme-winep-methodology).

Climate Change Sensitivity

As outlined in the BRAVA methodology, two additional climate scenarios were analysed to evaluate the impact on the planning objectives of Lower Emissions and Higher Emissions climate scenarios.

The following graphics outline the impact on the planning objective risk numbers for the flooding and pollution planning objectives within the Level 1 Operating Area in the different climate scenarios that have been modelled.

PO1 – Internal Flood Risk – Level 1 Operating Area

PO2 – External Flood Risk – Level 1 Operating Area

PO3 – 1 in 50 Year Population at Risk – Level 1 Operating Area**PO6 – Pollution – Level 1 Operating Area**

Our business plan is based on adaptive planning principles. We begin to use this more and more to think about an uncertain future. This long-term strategy is being developed alongside the long-term planning frameworks – in particular, the well-established Water Resources Management Plan process and the new Drainage and Wastewater Management Plan process.

OPTION DEVELOPMENT

Our Plan

What Are We Doing?

The DWMP has been prepared taking the Best Value options within catchments and also including sustainable options that were not identified as Best Value but did reduce the volume of below-ground storage required within a catchment.

A summary of the total number of interventions that have been included within the DWMP across the Level 1 Operating Area are included within the following tables. Further details can be obtained on the Drainage Area Options and Opportunity drawings.

Storm Overflow Discharge Reduction Plan

Intervention Type	2025 to 2030	2030 to 2035	2035 to 2040	2040 to 2045	2045 to 2050	2050 to 2055	2055 to 2060
Storm Overflow Spill Frequency Reduction Schemes	159	150	227	228	253	-	-
Screening Provision Schemes	66	68	235	232	248	-	-

Wastewater Treatment Works Compliance

Intervention Type	2025 to 2030	2030 to 2035	2035 to 2040	2040 to 2045	2045 to 2050	2050 to 2055	2055 to 2060
WwTW DWF Compliance – Investigations / Schemes	3	2	2	-	1	-	3
WwTW Quality Compliance – Investigations	44 (P) 10 (BOD) 20 (Amm)	5 (P) 2 (BOD) 5 (Amm)	- (P) 1 (BOD) 2 (Amm)	1 (P) 1 (BOD) 2 (Amm)	- (P) - (BOD) - (Amm)	- (P) 1 (BOD) - (Amm)	- (P) - (BOD) 1 (Amm)
WwTW Quality Compliance - Schemes	24 (P) 8 (BOD) 12 (Amm)	21 (P) 3 (BOD) 8 (Amm)	4 (P) 1 (BOD) 5 (Amm)	- (P) 1 (BOD) 2 (Amm)	1 (P) 1 (BOD) 2 (Amm)	- (P) - (BOD) - (Amm)	- (P) 1 (BOD) - (Amm)

Long-Term Delivery Strategy – Flooding

The Government's 25 Year Environment Plan (25YEP) requires us to invest to:

- Reduce nitrogen and phosphorus pollution, through catchment and nature-based solutions where possible.
- Improve drainage and environmental water quality, and reduce surface water flooding risk, through our Drainage and Wastewater Management Plan (DWMP).

Our long term delivery strategy sets out our ambition to continue to reduce sewer flooding over the next 25 years. Our plan sets out how we will match the 25YEP by reducing internal and external sewer flooding by 60% by 2050.

Modelled Internal Hydraulic Flood Risk

Indicator	2025	2030	2035	2040	2045	2050
Internal Flood Risk - Baseline	15,787	16,200	18,663	21,125	23,587	24,314
Internal Flood Risk – Post-Enhancement	15,787	15,746	13,389	11,032	8,674	6,315
Enhancement Cost – Cumulative Totex (£m)	0	49	139	251.5	364	499

Modelled External Hydraulic Flood Risk

Indicator	2025	2030	2035	2040	2045	2050
External Flood Risk - Baseline	234,395	236,343	252,380	281,828	304,571	309,832
External Flood Risk – Post-Enhancement	234,395	233,256	198,382	163,507	128,633	93,758
Enhancement Cost – Cumulative Totex (£m)	0	0	100	225	350	500

Water Industry National Environment Programme (WINEP)

We have included proposals in our Business Plan for a number of schemes to be delivered between 2025 and 2030 to meet our statutory and non-statutory obligations and functions. The schemes that are proposed will deliver improvements against the drivers that are included in the following table.

WINEP Driver Code	Description
25YEP_IMP	Locally significant environmental measures not eligible under any other driver, but with clear evidence of customer support.
BW_IMP3	Actions to improve waters to Good or Excellent where there is evidence of customer support.
BW_INV3	Investigations to lead to improving waters to Good or Excellent where there is evidence of customer support.
BW_INV5	Investigations at non-designated waters where there is evidence of customer support.
BW_NDINV	Investigations for waters failing their Baseline class.
EnvAct_IMP1	Actions to Reduce phosphorus loading from treated wastewater by 80% by 2037 against a 2020 baseline.
EnvAct_IMP3	Improvements to reduce storm overflows that spill to designated bathing waters to protect public health.
EnvAct_IMP4	Improvements to reduce storm overflows spills so that they do not discharge above an average of 10 rainfall events per year by 2050.

EnvAct_IMP5	Improvements to reduce storm overflow aesthetic impacts by installation of screens.
EnvAct_INV4	Investigations to reduce storm overflow spills to protect the environment so that they have no local adverse ecological impact.
EPR_MON1	MCERTS certified WTW Total daily volume flow/max flow rate monitor
HD_IMP	Action to contribute to restoration of a European site or Ramsar site to move towards meeting the conservation objectives.
HD_IMP_NN	Actions to reduce total phosphorus and/or total nitrogen levels to the Technically Achievable Limit (TAL) from discharges which drain to catchments where Nutrient Neutrality is advised.
HD_INV	Investigation and/or options appraisal to determine impacts of Water Company activities, or permit/licence conditions/standards on a European Site or Ramsar site or to determine the costs and technical feasibility of meeting targets.
MCZ_INV	Investigation and/or options appraisal to determine impacts of water company activities, or permit or licence conditions/standards on a MCZ or to determine the costs and technical feasibility of meeting targets.
SSSI_INV	Investigation and/or options appraisal to determine impacts of water company activities, or permit or licence conditions/standards on a SSSI or to determine the costs and technical feasibility of meeting targets.
SW_INV	Shellfish waters improvement or prevent deterioration investigation.
U_IMP1	Actions to improve discharges from agglomerations that, through population growth, have crossed the population thresholds in the UWTR and therefore must achieve more stringent UWTR requirements. This includes newly qualifying discharges (from agglomerations >10,000pe) within existing sensitive areas. This includes discharges of >2,000 pe to fresh waters and estuaries and discharges >10,000 pe to coastal waters, as well as discharges >10,000 pe and 100,000 pe to Sensitive Areas.
U_IMP2	Actions to reduce total phosphorus and/or total nitrogen levels in qualifying discharges (from agglomerations >10,000pe) associated with the next review of freshwater Sensitive Areas (Eutrophic).
U_IMP7	Providing secondary treatment capable of achieving 40:60 BOD:suspended solids where a septic tank discharges to surface water.
U_MON3	MCERTS certified FPF overflow operation monitoring at WwTW or last in line SPS overflows.
U_MON4	MCERTS certified FPF flow monitoring at WwTW or last in line SPS overflows.
WFD_IMP_CHEM	To meet either good ecological status or good chemical status. Needed where an EQS is exceeded downstream of a wastewater treatment works discharge. Measures that fail economic tests will receive standstill limits under WFD_NDLS_CHEM1.
WFD_INV	Investigations of actions to improve water quality in terms of relevant WFDR status objectives.
WFD_IMPg	Achieve improvement objectives for WQ or prevent deterioration
WFD_INV_CHEM	Investigations.
WFD_INV_PHYSHAB	Actions to address barriers to passage of fish or impacted physical habitat in WFD failing waterbodies not designated artificial or heavily modified for water resources uses.
WFD_ND	Actions to meet requirements to prevent deterioration.

WFD_ND_CHEM3	Actions to meet requirements to prevent deterioration in chemical status because of growth.
WFD_ND_CHEM4	Actions to meet requirements to prevent deterioration to maintain existing standstill limits for chemicals if there is growth in the sewage works' catchment.
WFD_NDLS_Chem1	Measures related to load standstill requirements for chemicals (where EQS exceedance is predicted, but measures fail economic assessment associated with EQS).
WFD_NDLS_Chem2	Measures related to load standstill requirements for chemicals (below EQS). These are set where a wastewater treatment works is discharging significant concentrations of a chemical, but the EQS is not threatened immediately downstream. Targets are set to ensure that current effluent quality does not deteriorate and to contribute to broader aims to cease and phase out emissions, discharges and losses of priority hazardous substances and prevent pollution swapping. This driver would be used where there is no risk that growth between 2015 and 2021 would cause an actual failure of the EQS.

The full list of schemes that are proposed within the region can be found at the end of this document.

How Much Does Our Plan Cost?

As a top performing water and sewerage company, Northumbrian Water invests at a level to maintain existing performance. All the costs in the table below are additional to our existing expenditure to meet new statutory requirements and additional maintenance requirements.

The following table summarises the additional costs that are included within the DWMP for the delivery of the identified interventions. The costs shown in the table are £million.

Objective	2025 to 2030	2030 to 2035	2035 to 2040	2040 to 2045	2045 to 2050
Storm Overflow Spill Frequency Reduction Schemes	970.5	530.3	427.6	540	316.3
Screening Provision Schemes*	33.	38.2	105.3	55.5	60.8
WwTW Quality Compliance - Schemes	295	N/A	N/A	N/A	N/A
Flooding	49.00	160.00	200.00	200.00	240.00
Pollution	30	30	30	30	30
Resilience	15.18	15.18	15.18	15.18	15.18

The objectives in the table above will lead to additional operational costs which are set out in the table below. The costs shown in the table are £million.

Objective	2025 to 2030	2030 to 2035	2035 to 2040	2040 to 2045	2045 to 2050
Storm Overflow Spill Frequency Reduction Schemes	2.1	2.9	3.4	6.2	10.8
Screening Provision Schemes*	0.2	1	1.5	2.5	3.4
WwTW Quality Compliance - Schemes	62.4	70	70	70	70
Flooding	0	40.00	50.00	50.00	60.00
Pollution	10	10	2	2	2
Resilience	0	0.18	0.18	0.18	0.18

CONCLUDING COMMENTS

Our DWMP forms part of our long-term delivery strategy. As we go about this, we will need to review our progress and adapt our future plans to take into account changing circumstances. These include how customer views about priorities and affordability evolve; new technologies that emerge; how supply chain capacity develops; changes in weather patterns; and customer behaviour changes.

Setting a long-term delivery strategy allows us to seek early certainty on the investment we do not expect to change, while acknowledging these factors could mean choosing different pathways in future. We will consider those choices as and when we update our DWMP and at subsequent price reviews, which take place every five years. At each point we update our DWMP, we will look further into the future to maintain a 40-year outlook on these issues.

Our PR24 business plan, covering 2025-30, will include projects to drive better, more efficient, and nature-based solutions to tackling drainage and storm overflows in the future.
